

Automation

## Strong partners offer strong solutions

systron automation offers **fast** and **efficient integration** of systron processing systems in **existing productions** and allows all freedom in new concepts with the following products:

- **systron** TRANSPORT
- **systron** PASSAGE
- **systron** TILTING TABLE
- **systron** RAIL TILTING TABLE
- **systron** SHUTTLE
- **systron** TURN SHUTTLE
- **systron** STORAGE
- **systron** ROBOT INTEGRATION
- **systron** INSPECTION
- **systron** SOFTWARE

## Systron automation offers over the existing product portfolio:

- + high innovative power
- + fast development competence
- + maximum solution orientation enables highest quality and flexibility

# ***syston***

## *TRANSPORT and PASSAGE*

The "syston TRANSPORT" is equipped with **belts or rollers**. The "syston Passage" makes it possible to pass through transport routes.

Transport

passage

## Highlights

Flexibility by modular design

Easy and fast installation

# *sys tron* TILTING TABLE

The "sys tron TILTING TABLE" serves as an **interface** between the **horizontal** and the **vertical transport** of glass panes.

Depending on the requirements, the "sys tron TILTING TABLE" conveys **one or more** panes of glass.

Horizontal	.....>	Vertical
Vertical	.....>	Horizontal

## Highlights

- + Low maintenance due to a solid construction
- + Dynamic and precise thanks to integrated servo technology

# ***sys tron***

## *RAIL TILTING TABLE*

In addition to the connectivity of horizontal and vertical glass transport routes, the "sys tron RAIL TILTING TABLE" can also be used as a **traverse transport** to exploit local conditions or to give new concepts **maximum performance**.

Tilting-Table

### Highlights

Flexible in movement

Dynamic, exact with  
high repeatability by  
integrated servo technology

# *sys tron* SHUTTLE

The "sys tron SHUTTLE SYSTEM" enables a **cycle-time-optimized traverse transport** of **glass panes** and serves as a link between vertical processing stations. The rail system is designed for **very high speeds** and **accelerations**.

## Highlights

- + Optimized cycle time, glass transport carried out during shuttle movement
- + Extendable due to standardized rail system
- + Less maintenance, due to automatic lubrication system

# ***systron*** *TURN SHUTTLE*

The "systron TURN SHUTTLE" is the extension of the "systron SHUTTLE" with a **swivel function**. The 180° rotation function, for example, gives also an inclination change for Low-E glass panes during traverse transport.

## Highlights

The glass sheet will be rotated during transport

Turning function easily reaches 270°

Ideal for applications with limited space

Optimal for loading "face to face" positioned production lines

# *systron* STORAGE

The "systron STORAGE" is an **automatic storage** system. This storage system serves as an integrated buffer system and increases the degree of automation of a glass processing line.

## Highlights

- + 20 individually selectable slots
- + no mechanical touch, to protect glass with a Low-E coating
- + The newly developed storages concept allows to load and unload glass panels without lifting the glass sheets

# ***syston***

## *ROBOT INTEGRATION*

Industrial robots, nowadays are standardized components which increase the degree of automation and are a fixed part of the **factory automation**. **Seamless integration** and the required precision are achieved by an innovative concept approach.

## Highlights

Industrial robots offer maximum  
flexibility and standardization

Increased production safety  
by highest precision

Innovative and space-saving

# *systron* INSPECTION

The "systron INSPECTION" is a **control track** for optical inspection of glass sheets.

## Highlights

- + Indirect illumination by means of LED
- + Space-saving modular design

# ***sys tron***

## *AIR CUSHION TABLE*

The "sys tron AIR CUSHION TABLE" is a horizontal **glass transport- and manipulation table**

Transport

### Highlights

Adjustable air flow by means of frequency converter

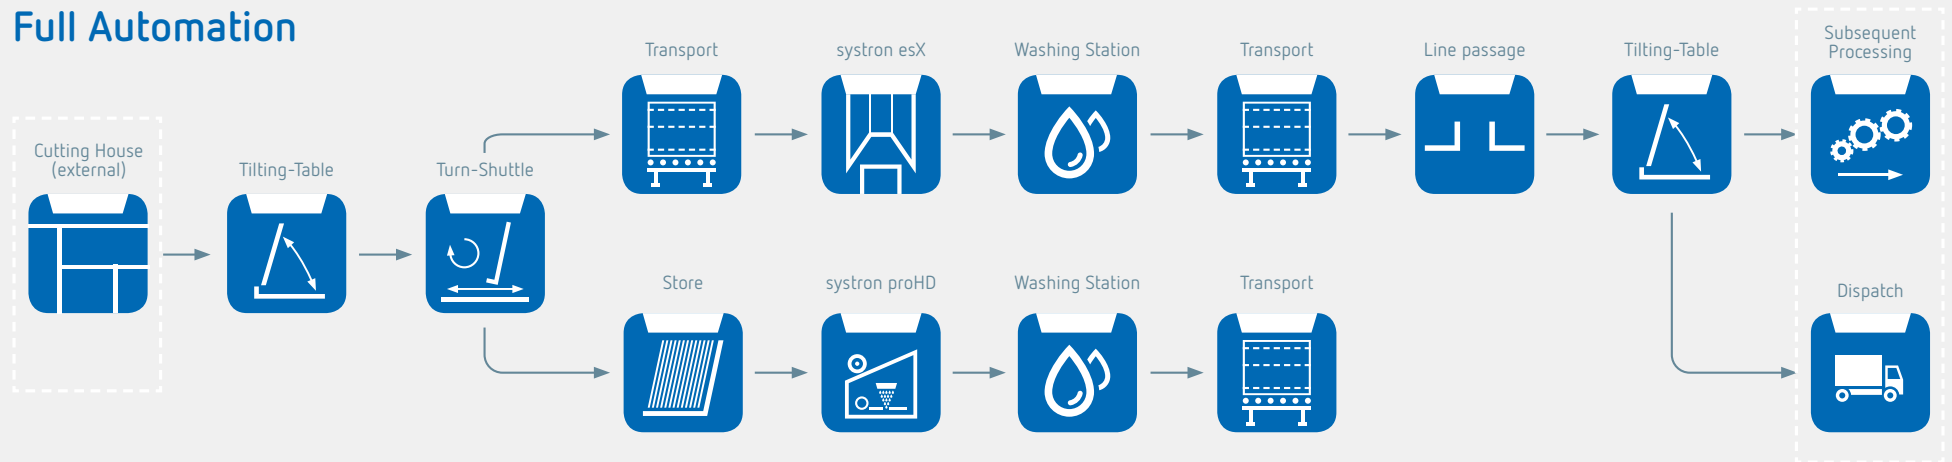

Maximum flexibility by zone control

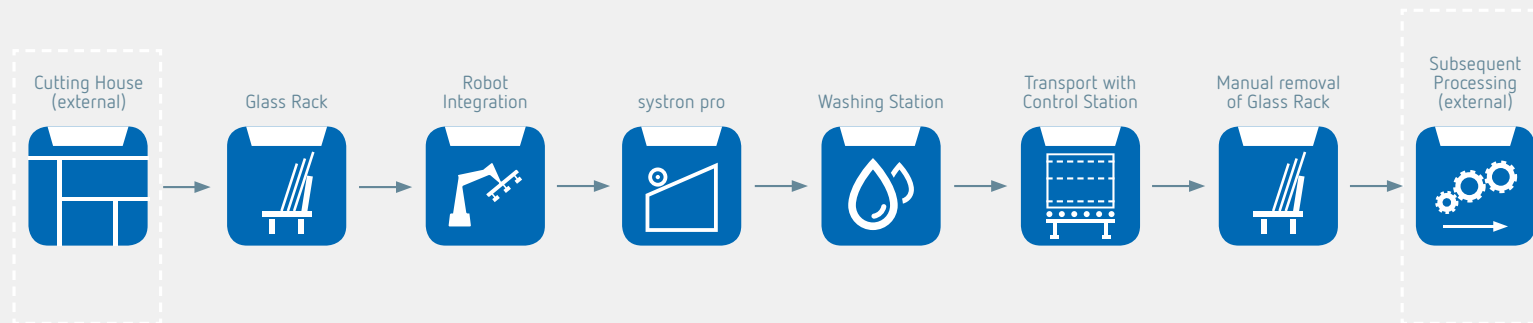

# Tailored solutions: from pre-cut up till full automation

## Full Automation

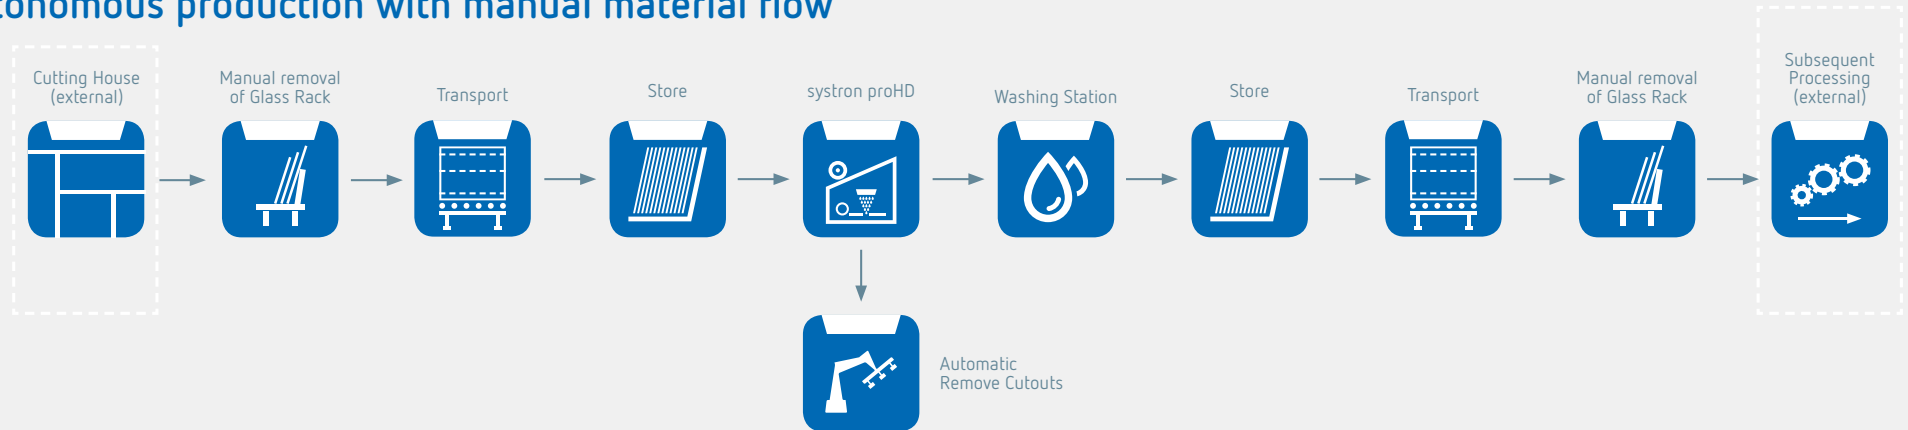

## Automatic Loading and Unloading

## Autonomous production with manual material flow

*The degree of automation can be adapted individually to the needs of the production.*

# *sys tron* SOFTWARE

## PMS – Production Management System

The PMS is a **production-oriented and tailor-made software** for networking sys tron processing lines. The visualization of production data is **visualized live** and in **3D** from monitors in production to mobile devices.

Intégration  
des robots

## SRI – *sys tron* Robotic Integration

Modern industrial robots increase the degree of freedom in factory automation and thanks to the "sys tron SOFTWARE" they are **intelligently** adapted to all needs.

## Highlights

Individually customizable

Fast implementation by the  
use of industrial standards

Opens new standards in glass production
